Practical-4

Deploy the Machine Learning Model using Flask and Docker.

Task 1: Install the required libraries
       pip install
Flask
pip install gunicorn

Task 2: Follow the steps described in theory material to deploy the model using Flask. Run the flask application to execute the deployed model.

Flask Code :

```
from flask import Flask, jsonify, request   from your_model import predict
# Import your model's prediction function

app = Flask(__name__)

@app.route('/predict', methods=['POST'])
def prediction():     data =
request.get_json(force=True)
    result = predict(data)  # Use your model to make predictions     return
jsonify(result)

if __name__ == '__main__':
    app.run(port=5000)
```

Task 3: Create the docker file using the steps described in theory material.

Docker File Code :

```
FROM python:3.8-slim
WORKDIR /app
COPY . /app
RUN pip install --trusted-host pypi.python.org -r requirements.txt
EXPOSE 80
ENV NAME World
CMD ["python", "app.py"]
```

Task 4 : Create the Docker Image

docker build -t dockerfile .

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker build -t dockerfile .
[+] Building 25.5s (9/9) FINISHED
 => [internal] load .dockerignore
 => => transferring context: 2B
 => [internal] load build definition from dockerfile
```

Task 5 : Create the Docker File

```
What's Next?
   View summary of image vulnerabilities and recommendations → docker scout quickview
PS D:\SEM 7\ML-OPS\Practical\practical> docker run -p 4000:80 dockerfile
```

Task 6 : Check Performance

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker images
REPOSITORY    TAG       IMAGE ID        CREATED         SIZE
dockerfile    latest    ee193e6cc1a7    2 minutes ago   509MB
hello-world   latest    9c7a54a9a43c    6 months ago    13.3kB
```

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker images
CONTAINER ID    NAME                CPU %    MEM USAGE / LIMIT    MEM %    NET I/O    BLOCK I/O    PIDS
785e4a62c222    quizzical_bardeen   0.00%    0B / 0B              0.00%    0B / 0B    0B / 0B      0
```

Task 7 : Hands-on on docker commands:

1. docker pull ubuntu:latest

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker pull ubuntu:latest
latest: Pulling from library/ubuntu
aece8493d397: Downloading [=================================================>    ]   26.84MB/29.54MB
```

2. docker ps

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker ps
CONTAINER ID    IMAGE      COMMAND      CREATED     STATUS     PORTS      NAMES
```

3. docker ps -a

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker ps -a
CONTAINER ID    IMAGE               COMMAND            CREATED        STATUS                  PORTS    NAMES
785e4a62c222    dockerfile          "python app.py"    7 minutes ago  Exited (0) 7 minutes ago         quizzical_bardeen
523f21a1dd21    dockerfile          "python app.py"    8 minutes ago  Exited (0) 8 minutes ago         xenodochial_moser
98032478cfe5    hello-world:latest  "/hello"           2 months ago   Exited (0) 25 minutes ago        mystifying_fermi
```

4. docker inspect container_name or id

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker inspect 785e4a62c222
